

Head dashboard: UI/UX audit

Huchu schools vertical audit · Head dashboard: UI/UX audit · head/ui-ux.md · rendered 2026-09-15

Surface: the head's oversight screens under `app/schools/**`: overview (`schools-dashboard-content.tsx`), admissions, students and roll-up, guardians, record pages, attendance and follow-up, results (overview, sheets, moderation, publishing, class), homework, lessons and resources, goals, meetings, boarding (bed board, allocations, leave, welfare), messages, notices, reports. Audited from source and from `docs/screenshots/schools/the-roll/*`, `teaching/*`, `visual-pass-*/*`, `welfare-*`, `year-rollup-*`, `admissions-*`, `search-*`. Workflow companion: `workflows.md` in this folder.

Rules applied: the platform UX playbook, the design-system rules, the campus canvas law, screen contract and states doc, `.impeccable.md`, `SPEC.md`. Full rule digest and per-screen evidence in `../reference/backoffice-ui-ux-evidence.md`.

1. Verdict in one paragraph

The head's screens are built on the right skeleton where they use `PageChrome`, a band and `TableControls` (students, attendance, staff, boarding, library, transport, arrears), and the confirmation and reason copy in results moderation is exemplary. But the head meets four systemic problems on every visit. Screens name themselves two or three times (in-page heading, app bar, card header) and repeat their counts in chips, tabs and stat cards. The shipped sidebar is the wrong one: it drops sixteen working routes, shows a meaningless top-level "Whole school" item, and its only academic-setup entry redirects into the teacher portal. Seven screens ship the designer's rationale as product copy ("Every row is a dead end", "That was the fault this board was built to fix"). And the overview, the head's first screen, is a row-count page that shows zeros, six identical Remind buttons and a fee panel that never resolves. On a phone the results and attendance pages spend the entire first screen on chrome.

Two of those four are now answered. The sidebar is generated from `lib/navigation.ts`, filtered by the persona's view grants, with master data in a Setup band, "Whole school" renamed "Registers", and a landing page per persona. The rationale cards are gone from all seven screens, and with them the stat cards that repeated their own band chips. Five more screens name themselves once — notices, guardians, teaching staff, documents, and the homework and goals route files that drew a heading above their content — leaving thirteen route files still drawing one under a bar that carries the name already, the overview among them. The overview is unchanged, and the phone problem is unchanged on the head's screens, although the fee ledger — which the head reads — now has a phone renderer, two chips per view and its filters behind one control.

Runtime check (14 September 2026)

Verified on the seeded St Marys tenant as the head (see `../reference/runtime-verification.md`).

Confirmed at runtime: the shipped sidebar ("Whole school" top level, "Scheme of work" as the only academic-setup entry, no master-data links among 117 sidebar items); the overview's two "0%" ratios and six per-row Remind buttons; rationale cards rendering on homework, goals, arrears, notices and meetings; the results page at 390px with the table header below the fold; two search inputs on attendance. Corrected: the attendance page does have a bulk reminder; the overview does not.

Revised on 15 September 2026 against the eighteen commits that followed the audit (01de8a3...HEAD). A finding the work closed keeps its description and gains a line saying it is closed and what closed it; a finding the work did not reach stands as it was written; a finding the implementation proved wrong says so and says what is actually true. One in this document was wrong: the office inbox was recorded as replying in page, and it could not reply at all.

2. Screen-by-screen

Route	Component	Contract violations	Friction	Role awareness	Phone	Severity
/schools	schools-dashbo oard-content.t sx (1,247 lines)	PageHeading "School overview" plus bar "Schools"; band chips "Collected —" and "Owing —" beside stat cards that also say "—"; four stat cards repeat two chips; "0%" where the denominator is zero ("Present today 0 · 0% of the 0 registers in", "Beds occupied 0% · 0 of 0"); "0 out past their return date" as a count; toLocale String ×9; fee panel skeleton visible after everything else loaded; since revised, the hand- drawn ageing bars are the shared Ag eingStrip and the panel reads "Nothing is owed" instead of ageing five zeros, and nothing else on this screen has changed	Six rows each with its own Remind and no "Remind all"; day, term and year filters ignored by the fee panel; nothing says what to do first	No useSchoolAc cess ; Remind not gated. Still true, and it is why an HOD meets 403s here while the rail no longer offers those bands	Not captured; tiles are sm:grid-col s-4 , panels stack	P1

Route	Component	Contract violations	Friction	Role awareness	Phone	Severity
/schools/admissions	admissions-board-content.tsx	PageHeading plus bar; "kanban" is a vertical list of stage groups; each row carries every allowed transition inline, up to six buttons; counts sentence duplicates group headers. Fixed in c65e58a : a row carries the one step the stage ladder expects next and folds the rest into a menu, and a closed stage offers nothing inline, because reopening a declined application is a decision rather than the obvious press	Six presses to walk one applicant; no bulk decide; phone sheet stacks the primary above Cancel; DOB is a native mm/dd/yy yy input. The six presses, the missing bulk decide and the native date input are unchanged	Gated (approve vs edit split, good)	MobileList.Row everywhere	P1
/schools/students	students-list-content.tsx	PageChrome (good); chips repeat tab counts; second Export in the DataTable toolbar; card header "Active students · 119 students · sorted by class" is a third statement; "Filter" opens a second filter surface; Class – blank beside Year Form 1 under a "Form 1" group header; fee badges Paid, Partial, Overdue vs the ledger's Issued, Part paid; rows about 88px vs the canvas's 36/44	Checkboxes render but bulkActions is never passed anywhere in components/schools ; "Roll up the year" styled as an action but is a link	Gated	Two-line cards with chevron, but the card header and Columns/Export row push the first pupil to y≈420	P1
/schools/students/class/[classId]	class-students-content.tsx	Caption, band and tab all say "20 on the roll"; Class filter shows the class already in the URL; group header "Not in a class yet" over every row when the school has no streams	Class list print in the band is good	Gated	present	P1

Route	Component	Contract violations	Friction	Role awareness	Phone	Severity
/schools/students/roll-up	year-rollup-content.tsx	Disabled bar primary "Roll 0 students up"; band chips all "—"; a warning alert that is explanation	Defaults ("Current term → The next one") do not produce a plan, so the first-run screen is dead; confirm without reason or undo	Not gated at page level	present	P1
/schools/guardians	guardians-content.tsx	PageHeading plus caption "119 on file · 118 not invited" plus band "Not invited 118"; "Invite 99 to the portal" beside "118 not invited" with no explanation; three control rows; ACTIONS column clipped; PORTAL "Not invited" as plain text; LINKED STUDENTS as a bare "1"; phone card says "1 children"; surname-first here, first-name-first on students. Since revised (27 2edf4): PageChrome with one title, the caption gone, the invite verb labelled with the count it will actually reach, and Title Case headers down to sentence case. Delete is now "Delete for good", shown only to an administrator, with a confirmation saying the record does not come back — the route's real behaviour. "1 children", the name order and the bulk-only invite are unchanged	Invite is bulk-only with no selection	Gated	cards	P1

Route	Component	Contract violations	Friction	Role awareness	Phone	Severity
Record pages	records/*-record-page.tsx	RecordPageShell (compliant); student's bar primary is two print buttons; Fees tab links to /schools/finance?invoice= which the page does not read		Gated	not captured	P1
/schools/attendance	register-over-sight-content.tsx (the documented exemplar)	Second search plus Search, Columns and Export inside the DataTable (two search inputs confirmed at runtime); card header "6 on the ladder"; explanatory "When the school was closed" paragraph; native date shows 09/14/2026 ; "The week" card of five dashes; pagination on six rows. Since revised (272edf4): the card header, the explanatory card and the sentence restating the band are gone, and the screen gained the Lock verb the permission work enabled — on a submitted day, absent rather than disabled for a bursar or a teacher, with a locked day reading as locked. The second search, the native date and "The week" card of dashes are unchanged	"Copy the missing list" and "Send all six a reminder" are good verbs	RecordActions gated	Band wraps, banner, five stacked filters, card header, second search with the button clipped, table header at y≈790 with "FORM TEACHE" cut. The worst phone screen in the set.	P1
/schools/attendance/follow-up	absence-follow-up-content.tsx	Second search; "LAST AWAY Aug 31" not 31 August ; "RUNG HOME Not yet" as text; chips "To follow up 17" vs "Unexplained 75" unexplained	Ring a family is three clicks into a notice dialog titled "Ring home"; no call log without a send; no "Send to all 17"	Gated	six-column table at 390px	P1

Route	Component	Contract violations	Friction	Role awareness	Phone	Severity
/schools/results	results-overview-content.tsx	PageHeading plus description plus bar; band chips and a six-tab strip with the same counts; card header with a rationale subtitle; four filters then a second search row; state words Entering, In review, Queried, Ready differ from the sheets page's Draft, Submitted, Sent back, Approved	"New mark sheet" as the office primary when the office's verb is chase, not create; pagination on an empty table	CreateButton gated	Title, two-line description, primary, chips over two rows, clipped tabs, four selects, card header, search, button, Columns/Export: the table header is not on the first screen	P1
/schools/results/sheets, /moderation, /publish	mark-sheets-content.tsx, moderation-queue-content.tsx, publishing-content.tsx	Four lists of the same sheets; moderation has eight band chips including three window counts that belong to publishing; publishing has eight chips and a duplicate windows CRUD; status filter twice	Approve and send back with reason are done right; the HOD cannot see marks and verbs in one place without a dialog; no "publish all approved for Term 3"	useSchoolAccess used on moderation	none	P1
/schools/homework	homework-overight-content.tsx	PageHeading ; chips and three stat cards with the same numbers and a subtitle each; five filters plus a second search row; right-rail cards "Every row is a dead end" and "Why the tiles ignore the filter" (: 638-660)	Verbs "Who has not handed in" and "Nudge the teacher" are good	Gated	none	Fixed (272edf4): the rationale rail and the duplicated stat cards are gone, and the route file no longer draws a heading over a bar that carries one. The filters and the second search remain, at P1
/schools/goals	goals-overight-content.tsx	PageHeading ; band and stat cards duplicate; rationale cards "The rows start from the roll", "No mark is not behind", "The missing half" (: 515-540)	No per-class bulk target	useSchoolAccess used	none	Fixed (272edf4): cards and duplicate stats gone, heading dropped from the route file. No per-class bulk target, at P1. This screen also read unpublished marks, which 1b774ea closed
/schools/teaching/lessons, /resources	lesson-plans-content.tsx, resources-content.tsx	PageHeading ; explanatory paragraphs; cover dialog with its own paragraphs	Cover is a real office job buried in a lesson row		present	P2

Route	Component	Contract violations	Friction	Role awareness	Phone	Severity
/schools/meetings	meetings-admin-content.tsx	PageChrome (good); side card "Releasing a slot" with "Nobody is told automatically — ring them." (: 971-976); ALL CAPS group headers. Fixed in 272edf4 : the side card is gone and the one thing it said that a user needed — that releasing a slot tells nobody — is in the release confirmation, where the decision is taken	Book on a family's behalf is a dialog; print evening is good	useSchoolAccess used	none	P1
/schools/boarding, /allocations, /leave	bed-board-content.tsx, boarding-allocations-content.tsx, boarding-leave-content.tsx	Band and five Title Case stat cards on the bed board and again on allocations; PageChrome title ="Boarding Management" ; raw enum filter options LEAVE and OUTING; a card subtitled "the other view"	Bed board and allocations are the same data	Gated	none	Mostly fixed (272edf4): allocations is titled "Allocations" and has dropped its five stat cards and its card header; leave is "Leave and outings", has dropped four stat cards and the "the other view" subtitle, and its filter reads Leave and Outing. The bed board keeps its band and five Title Case stat cards, and is still the same data as allocations, at P1

Route	Component	Contract violations	Friction	Role awareness	Phone	Severity
/schools/boarding/welfare	welfare-content.tsx	PageChrome with "Log a visit" (good); chips and three stat cards with the same numbers; three inline buttons per row ×119 with "Clear" as a red danger button; sentence repeating the chip. Fixed in part (c65e58a): the row keeps Record or Update inline — filling the record in is what the row is for — and folds "Log a visit" and the destructive Clear into a menu, so the red verb is no longer the widest thing under a thumb. The three stat cards beside the chips remain. The screen is also no longer gated as boarding, so a day school has it and a class teacher can see an allergy on their own roll	Consent per child is a six-field dialog ×119; no class-level "consent received for all of Form 5"	Gated	three one-up tiles, then rows with the red Clear under the thumb	P1
/schools/messages	office-inbox-content.tsx	PageHeading plus description; assign dialog description is rationale	"Reply in page" was wrong. The screen had no composer at all: its verbs were assign and close, and a column headed "Needs a reply" pointed at a thread nobody on this screen could answer. "End the conversation" confirm is good; no unread badge in nav. A composer now exists (d26c31e), shown only to a reader holding schools.reports_reply and only on a conversation still open, rather than shown and then refused	Gated	none	P1

Route	Component	Contract violations	Friction	Role awareness	Phone	Severity
/schools/notices	schools-notices-content.tsx	PageHeading "School Notices"; side card "A notice cannot be recalled" with a paragraph of product rationale (:576-579); to LocaleString ×6	No schedule, draft or recall, as the card admits	Gated	none	Fixed (272edf4): PageChrome title="Notice s", the side card gone, and the one warning that matters — a notice cannot be recalled — left where it is acted on, in the send dialog. There is still no schedule, draft or recall, at P1
/schools/reports	schools-reports-enhanced-content.tsx (1,518 lines)	"School Reports" Title Case; "Outstanding 29,910" with no currency; "Avg enrollment 40 across 3 terms"; "Hostel occupancy 0.0% · 0 of 0 beds"; Title Case tabs and chart titles; second search under the chart; rationale cards; the ageing chart contradicts the finance page	Export in the band is good	useSchoolAccess used	none	Largely fixed (f6556ee): money through formatSchoolMoney, the last Title Case headings down to sentence case, the last two rationale cards gone, a rate with nothing behind it reading "—" and painting neutral rather than danger red, and the ageing bands read from the one service the finance page and the dashboard read. The four computations behind that contradiction did not agree in general — a bill due today was overdue on the finance overview's SQL and Current in the arrears report — and the export's last column was labelled "120+ days" for a 90+ column. P1 for the remaining second search

3. Screenshot findings

- **Overview.** Good: band chips link to their screens; "Registers still to come in" is a queue with a verb per row; ageing sparkbars. Wrong: named twice; "Collected —" beside tiles that say "—"; zero-denominator ratios as 0%; six Remind buttons; the fee panel still a skeleton; "0 out past their return date"; "Whole school" in the sidebar; a global "Create" item competing with every page's primary. Of these only the

sidebar has moved: "Whole school" is now "Registers" inside Attendance, and the rail is generated and filtered by persona (72f9227). The screen itself is as photographed, except that the ageing bars are now the shared strip and are drawn only when something is owed.

- **Students.** Good: bar title and primary; tabs with counts; identity column with avatar; mono admission numbers. Wrong: chips and tabs with the same counts; Export twice; the card header as a third restatement; CLASS "—" beside YEAR "Form 1"; 88px rows; fee badges in the wrong vocabulary; attendance % left-aligned.
- **Classes.** Two navigation rails plus the school sidebar; description line; chips and tabs duplicated; filters stacked with "New class" floating; a third control row; "Capacity -"; pagination for six rows; a 740px table in a 1440px window.
- **Guardians.** Two header buttons with mismatched counts (99 vs 118); three control rows; ACTIONS clipped; "1 children". The invite verb now names the count it will actually reach, and the delete verb is an administrator's and says the record does not come back; the three control rows and "1 children" are unchanged.
- **Attendance.** "Send all six a reminder" in the banner (good, and the overview lacks it); five-control filter row plus a second search row; native date in US order; "The week" card of dashes; the explanatory paragraph. The explanatory paragraph and the card that restated the band are gone, and the board gained the Lock verb; the filter row, the second search, the native date and the week of dashes are unchanged.
- **Absence follow-up.** Full-bleed table (good); two search boxes; "Aug 31"; "Not yet" as text; the only verb behind a menu.
- **Results.** Header, description, bar, chips, six-tab strip, card header and subtitle: four layers naming one thing; pagination on an empty table.
- **Timetable.** "No periods yet" with a real next step (good); three section-header buttons with the primary greyed; filters over two rows; nothing to click to place a lesson; the grid never appears.
- **Homework.** Right rail of rationale prose taller than the table. Removed.
- **Admissions form (desktop and phone).** Sensible sheet; DOB in US order; primary disabled at open with no requirement text; the phone footer stacks primary above Cancel.
- **Search.** ⌘K palette with grouped results, mono ids, a detail pane, keyboard hints: the best interaction in the module. Mixed-case labels ("mother", "active").
- **Welfare (desktop and phone).** Bar primary (good); three inline buttons per row with a red Clear; phone tiles one-up. One verb inline and the rest in a menu now, so the red Clear is no longer under the thumb.
- **Year roll-up.** Greyed primary "Roll 0 students up" as the most prominent element; chips all "—"; "Choose the two terms" although the selects have defaults; at 390px the bar title truncates to "Ro...".
- **Results, attendance, teachers and guardians on a phone.** Between 600 and 844px of chrome before the first row.

4. Rule violations that recur

The count column is as audited; the note beside it is where the rule stood after implementation.

Rule	Violation	Count	After implementation
A page is named once	In-page <code>PageHeading</code> plus bar title	25 pages across the module	Thirteen route files still draw one, the overview among them; notices, guardians, teaching staff and documents moved to <code>PageChrome</code> , and homework and goals lost the heading from their route files
One search per screen	<code>TableSearch</code> above plus the <code>DataTable</code> 's own search row	10	Unchanged on the head's screens
Never the same fact twice	Chips duplicated by tabs or stat cards	14	The duplicated stat-card rows went with the rationale cards on ten screens; the bed board and welfare keep theirs
One primary in the bar	Multiple primaries or primary in the page	12	Unchanged
Row verbs in a menu	Inline stacks clipped	9	Fixed on admissions, welfare and the class fees page, where 28 of 49 buttons sat past the right edge of the viewport; each row keeps the one verb its state invites and folds the rest away
Strip explanatory copy	Rationale cards; 72 muted paragraphs	8 cards	All eight gone; what a reader needed from them moved into the confirmation that acts on it
Table becomes cards below <code>md</code>	No mobile renderer	27 content screens	One: the fee ledger, which now has a phone renderer, two chips per view and its filters behind one control on a phone only
Dates as <code>3 June 2026</code>	Native <code>type="date"</code>	31 inputs in 18 files	Unchanged in the back office; the teacher's register took the design-system picker
Money and dates through the formatter	<code>toLocaleString</code> , <code>toFixed</code>	56 sites	The reports page goes through <code>formatSchoolMoney</code> ; the overview's nine <code>toLocaleString</code> calls remain
Sentence case	Title Case and ALL CAPS	10	The Title Case headings are swept, apart from the bed board's five stat cards; the ALL CAPS group headers on meetings remain
One status vocabulary	Results states named two ways; fee statuses two ways; bare text states	6	"Overdue" is a filter rather than an invoice status now; the results vocabulary is still two
Bulk actions where the job is bulk	None anywhere	all tables	One: Remind on the fee ledger, which is the only bulk verb with an endpoint behind it. Bulk issue, print, activate and approve were deliberately not faked by fanning out browser requests

Rule	Violation	Count	After implementation
Ratios with zero denominators render "—"	0%	5	Fixed on the reports and arrears pages; the overview's two remain
Route-level loading, error, not-found	None under <code>app/schools</code>	all	Fixed (<code>0089c5b</code>): a skeleton, an error boundary quoting its digest and a not-found at the segment root, with skeletons mirroring the distinctive layouts — the timetable as a week grid, admissions as a card board, the four record pages as their property rail — and the class routes sending a person back to the list they came from
Consistent name order	Surname-first on some lists, first-name-first on others	8	Unchanged

5. Suggested edits

All five P0 items are done, in `272edf4`, `72f9227`, `f6556ee` and `c65e58a`. Of the P1 list, 13, 16 and 18 are done; 6, 7, 8, 10, 11, 12 and 14 are done in part; 9, 15 and 17 stand, as does the P2 item.

P0

1. Remove rationale cards: `homework-oversight-content.tsx:638-660`, `goals-oversight-content.tsx:515-540`, `reports-arrears-content.tsx:797-812`, `schools-reports-enhanced-content.tsx:1090-1100`, `schools-notices-content.tsx:576-582`, `meetings-admin-content.tsx:971-980`, `register-oversight-content.tsx:844-858`. Done, all seven, with the duplicated stat cards beneath them.
2. Fix the sidebar: generate the SCHOOLS workspace sections from `lib/navigation.ts:280-398` (delete or derive `lib/workspaces.ts:363-484`); remove "Whole school" as a top-level item and the "Scheme of work" redirect. Done by deriving rather than deleting: one band, one section, so a band that gains a screen gains it in the rail the same day. Each band declares the resource whose view grant gates it, master data is in a Setup band, "Whole school" is "Registers" inside Attendance, guardians moved to the roll so a warden can reach a family, and each band carries its own icon — without one a band borrowed its first item's, which opened Fees with the warning triangle belonging to Arrears. A role the persona model does not describe keeps the full rail, because reading its silence as "no" would empty the sidebar rather than tailor it.
3. One ageing computation and component across the overview, reports and finance. Done in `f6556ee`, and there were four computations rather than three: the server's own report builder was the fourth. They did not agree.
4. Row verbs to `layout="menu"` on admissions (`admissions-board-content.tsx:484`) and welfare (`welfare-content.tsx:450`). Done, keeping one verb inline on each row — the step the stage ladder expects next, and on welfare the act of filling the record in.
5. Money chip through `formatSchoolMoney` (`schools-reports-enhanced-content.tsx:715`). Done.

P1 6. Replace `PageHeading` with `PageChrome` on the 25 pages; move each create verb into the bar; delete captions that repeat chips. Done on notices, guardians, teaching staff and documents, and dropped from the homework and goals route files; thirteen route files still draw one. 7. One search per screen; delete the duplicate stat-card rows; hide pagination when there is one page. The duplicate stat-card rows are gone from ten screens. The second searches and the pagination on short tables are unchanged. 8. Design-system date picker at 31 sites; formatter at 56 sites; sentence-case sweep; pluralisation fix on the guardians phone card. The sentence-case sweep is done; the reports page goes through the formatter. The date picker and the pluralisation are untouched in the back office. 9. One results vocabulary (Draft, Submitted, Sent back, Approved, Published) on the overview tabs and chips, then one sheets list with those as views. 10. Bulk actions on the queues where the job is bulk: students (invite, move class, archive), guardians (invite), follow-up (send to all), welfare (consent received). Only Remind, on the fee ledger and the arrears report, because it is the one the API performs in a single call; the rest have no endpoint and were not faked by fanning out browser requests. 11. Gate page and band verbs with `useSchoolAccess().can()` (overview Remind, roll-up primary, meetings Release) and hide bands the persona has no `view` grant on. The bands are hidden by grant now, and the register board's Lock and the guardians Delete are absent rather than disabled for a reader who cannot use them. The overview's own verbs are still ungated. 12. Reason capture and undo for student archive, teacher delete, free the bed, roll-up. No reason capture. Archiving a teacher reads as archiving and offers a way back, which is the undo for that one; a pupil's archive and the roll-up have neither. 13. Route-level `loading.tsx`, `error.tsx`, `not-found.tsx` under `app/schools` using `TableRowsSkeleton`, `LoadError`, `RecordNotFound`. Done, with the skeletons mirroring the shapes they stand in for. Nothing below the segment root takes its own error boundary, deliberately: a second copy would repeat one alert with a different noun. 14. Zero-denominator ratios render "`—`"; overview fee panel gets a `NothingYet` instead of a permanent skeleton; "Remind the 6" replaces six buttons. The ratios read "`—`" on the reports and arrears pages; the overview's two ratios, its fee panel and its six buttons are unchanged. 15. Absence follow-up: "Log a call" (outcome and note), "Send a notice", "Send to all 17"; "Rung home" as a toned badge with the date. 16. Admissions: one likely next verb inline (Offer, Accepted, Enrol) and the rest in a menu; consider the cookbook `KanbanBoard` with "move to..." per card. Done, as the first half; the board is still a vertical list of stage groups. 17. Record page primary: "Take payment" when there is a balance, otherwise "Edit details"; documents in the overflow; fix the dead fees deep link. Not done on the record page. The fee ledger did gain a Take payment verb it never had, offered only where there is a balance and the reader may take one, so the row never promises what the permission model refuses. 18. Guardians: "Invite the 99 with an email" or make the chip match the button. Done: the verb names the count it will reach.

P2 19. One name order via a `PersonName` helper; timetable grid with cell-click placement; collapse duplicate CRUD (windows, subjects, sheet lists); a "Back to School Operations" on master-data pages.

6. Proposed restructuring

- **Sidebar from one source**, in the order of the school day: Overview · Roll (Students, Applications, Guardians, Roll up the year, Import) · Attendance (Registers, Absence follow-up) · Boarding · Teaching (Timetable, Homework, Lesson plans, Resources, Targets) · Results (Sheets, Moderation, Publishing) · Fees · People (Teachers, Support staff, Assignments) · Communication (Messages, Notices, Parent meetings, Calendar) · Services (Library, Transport) · Setup · Reports and documents. Done in 72f9227, with two departures: the staff band is called Staff rather than People, because the HR module's rail

already carries that name and two entries of one name pointing at different populations is a coin toss every time; and Calendar sits in Setup.

- **Persona-aware rail and landing:** hide bands with no view grant; the persona's own band first; preferredHomeHref per persona (head /schools, HOD /schools/results/moderation, registrar /schools/students, warden /schools/boarding). Done, the bursar landing on finance. The bands a persona cannot view are gone from the rail, which is the half of the HOD's 403 problem the rail could solve; the overview still fetches every panel regardless.
- **One screen per fact:** a single sheets list with state views; one arrears surface that the overview and dashboard link to; one publishing-windows surface in setup; bed board and allocations merged.
- **Name each screen once:** app-bar title equals nav label equals the thing the page is.
- **Pastoral band** for welfare, consents and later behaviour, outside Boarding. Not done in the rail, where welfare is still an item inside Boarding, although the screen and its API are no longer gated on the boarding module or the boarding grant — so a reader who may now open a welfare record, the HOD and the bursar among them, cannot reach it from the sidebar.

7. Proposed new UI

None of this has been built. The implementation that followed the audit repaired what was on the screens rather than replacing them, and the head's overview is the screen it was. The two interaction patterns it did add, elsewhere, are a row's verbs folding into a menu and a table's filters folding behind one control on a phone.

Head's term dashboard (/schools)

- Hero: Present today, percentage with a ten-day sparkline and delta vs last week, tinted by the school's threshold.
- Queue row (two-up on phone): Registers still to come in with "Remind the 2"; Unexplained absences of two days or more; Mark sheets waiting on moderation; Publish window closes in N days.
- Second row: Applications to decide; Offers lapsing this week; Boarders out tonight; Children with an allergy and no consent (danger tone); Homework overdue; Pupils with no target.
- Queues: "Waiting on somebody" (keep); "This week" (meetings, notices sent and read %, library late); Attendance by year group with sparklines; Fees this term as three figures and the one ageing strip.
- Missing today and worth adding: attendance trend, staff absence and cover today, enrolment vs capacity per class, subject performance vs target (HOD view), unread parent messages, a calendar strip, an activity feed of governance actions.

Moderation workspace for the HOD: sheet list on the left with state, marks grid on the right with distribution, approve and send back with reason in the same view, no dialog.

Interaction patterns to add across the head's screens: bulk-action bar; ⌘ verbs and pages ("Open a register for Form 3", "New application"); URL-synced filters and saved views; an activity timeline on student, guardian and sheet records; "Log a call"; record peek on the guardian in a student row; inline quick-edit for one-field changes (form teacher, pass mark); a date stepper in the band (◀ Today ▶); requirement banners as the only disabled state; undo toasts for reversible writes; a phone shell per screen with filters in a sheet.

8. Accessibility

- Clipped inline verbs are unreachable by keyboard focus that lands off-screen; the menu fixes both. Done on admissions, welfare and the class fees page.
- The greyed disabled bar primary on roll-up has a `title`, which screen readers do not announce; render the requirement as text.
- Native date inputs announce in the browser locale; the picker fixes it.
- Colour-only states (red Clear at rest, red collected bars) need an icon or word; canonical badges carry both.
- Group headers in ALL CAPS are read letter by letter by some screen readers; sentence case with `text-transform` is safer.
