

Parent portal: workflow audit

Huchu schools vertical audit · Parent portal: workflow audit · parent-portal/workflows.md · rendered 2026-09-15

Surface: `parents.<tenant>` host, routed to `app/portal/parent/**`, backed by `app/api/v2/schools/portal/parent/**` and `lib/schools/parent-household-loader.ts`. Audience: guardians with `SchoolGuardian.userId` linked to a `User` of role `PARENT`.

Audit date: 2026-09-14. Method: static read of the code on `main` (no runtime), cross-checked against the roadmap stories in `docs/expansion-plan/schools-roadmap.md`, the portal contract in `docs/design-system/portals/README.md` and `parent.html`, the marketing promises in `app/home/site-data.ts`, and the K-12 benchmark in `../reference/k12-benchmark.md`. The companion UI/UX document is `ui-ux.md` in this folder.

1. Verdict in one paragraph

The parent portal is a real, correctly scoped read-only window onto one family's records: attendance, published marks, fee lines, receipts, notices, and a two-way message channel to the office. Identity is sound (one resolver, hard 403 on any foreign id, consent flags enforced server side with an integration test). It is not yet the self-service surface the marketing site sells. The two document downloads always fail for the `PARENT` role, there is no way to pay, no way to update contact details, no notification of anything, and the attendance screen tells most parents their child's register is "not yet submitted" because the teacher portal never submits one. Ten of the twenty parent stories in the roadmap are still `todo`, and the prototype contains screens (leave request, calendar, timetable, child medical profile, payment history) that no story covers.

The two worst of those are now closed. A portal caller is judged by record rather than by role, so the statement, the invoice and the receipt reach the family they were written for; and the teacher portal sends a register in, so a day reads as sent in rather than as pending. The report card is a harder case than the audit saw: its permission failure is fixed and it still will not print, because it is gated on an open publish window and no school has one (B10). The claim flow can no longer be pointed at an account that already exists. What is unchanged is the part that makes this a self-service surface: there is no way to pay, no notification of anything, no password reset, and no way for a parent to correct the phone number the school reaches them on.

Runtime check (14 September 2026)

Verified on the seeded St Marys tenant as `parent@stmarys.test` (see `../reference/runtime-verification.md`). Confirmed at runtime: B1 (receipt and report-card downloads return 403 from the render route), B2 (every attendance day reads "not yet submitted" because the staff portal never submits), the absence of any way to pay, and the missing navigation above 900px. The notice list shows each notice's full body, so P15 is stronger than the static read suggested; there is still no detail view, reply or RSVP.

Revised on 15 September 2026 against the eighteen commits that followed the audit (`01de8a3..HEAD`). A finding the work closed keeps its description and gains a line saying it is closed and what closed it; a finding the work did not reach stands as it was written; a finding the implementation proved wrong says so and says what is actually true.

2. Docs versus code

Claim	Source	Code reality	Verdict
"Parents check balances, statements and results on their own phone"	site-data.ts capability card	Balances and results: yes. Statement PDF: the button exists but POST /api/documents/render requires schools.fees view, which PARENT does not hold (lib/platform/personas.ts:160-162, app/api/documents/render/route.ts:101-108). Fixed in 1f1501c : a portal account that fails the office grant is judged by record instead — the SchoolStudentGuardian link to the pupil the document is about, plus the consent flag that document needs — so the statement, the invoice and the receipt download. The report card passes that check and then fails a second one (B10).	True of money; the report card still does not print.
S-6.7 receipt download, S-6.8 term statement download: done	roadmap	Same render-route refusal. Every parent hits "Your role cannot view fees". Fixed in 1f1501c ; both stories are now true of the user they were written for.	Story marked done but broken for its user; now working.
S-6.4 attendance with DRAFT labelled "not yet submitted": done	roadmap	Implemented (parent-attendance-screen.tsx:148-168). But POST /api/v2/schools/portal/teacher/me/attendance only ever writes DRAFT and the portal has no submit; only the office can submit or lock. Fixed in 50df723 : the teacher's save writes the marks and then sends the day in through the one route that owns the DRAFT → SUBMITTED transition, so a day a teacher has filed reads as filed. The label survives for the days that genuinely are still open, said once per section rather than on every row (ed82dc1).	True as coded, and no longer misleading.

Claim	Source	Code reality	Verdict
S-6.5 published marks gated on PUBLISHED and consent: done	roadmap	child/marks/route.ts:40-46 filters on sheet status and scopeToChild(needs:"academic-results"). Publish window is not checked in the JSON route, only in the report-card PDF. The observation is right and calling it a gap was wrong. A window check was added to this route during the implementation and deliberately reverted (1b774ea): no school has a publish window configured, so enforcing one here would have hidden every published mark from every family. The sheet's status is what gates the portal; the window gates the report card.	True, and the gap was not one.
S-6.12 notices with per-recipient read state: done	roadmap	Implemented over NotificationRecipient.	True.
S-6.14 message the teacher: todo	roadmap	A message channel exists at /portal/parent/messages (threads with the office, reply, start thread). Cannot address a named teacher from the UI; no attachments. Unchanged, except that the office can now answer what the family sends (B11) and the thread lives in the URL (ed82dc1).	More built than the roadmap says. Row needs updating.
S-6.1 OTP sign-in, S-6.9/6.10/6.11 payments, S-6.13 notice replies, S-6.15 events, S-6.16 language, S-6.17 2FA, S-6.18 sessions: todo	roadmap	None present. Login is email + password via the shared portal-login-form.tsx. Still accurate: nothing in this list has been built, and the login form is the one the audit read.	Accurate.
Help FAQ: statements and receipts "download as PDFs"	parent-help-screen.tsx: 28	False for a parent today. Now true: the downloads work (1f1501c) and the answers were rewritten to say what a parent can do rather than what the system does (ed82dc1).	Copy contradicted behaviour; it no longer does.
Prototype: leave request, calendar, library, timetable, child profile with medical/emergency/transport, quiet hours, payment history	parent.html routes	None built. No roadmap story for leave request, calendar view, timetable, child profile, or quiet hours. Past payments now exist on the Fees screen, grouped by month with method and reference (ed82dc1); the rest are as they were.	Contract gap not tracked.

Claim	Source	Code reality	Verdict
<code>live-capabilities.md</code> lists <code>/schools/portal/parent</code> as a live page	system reference	It is a three-line redirect to <code>/portal/parent</code> . Unchanged.	Stale doc.

3. Workflow inventory

Status key: Implemented = end to end with real writes; Partial = works with named gaps; Broken = control exists but the API refuses or the link is dead; Missing = absent.

#	Workflow	Status	Evidence and gap
P1	Get an account (staff invite, claim link, set password)	Implemented	<code>lib/schools/portal-invites.ts</code> , <code>app/c/[token]</code> . Delivery is manual copy-paste; no email, SMS or WhatsApp send. Claiming now opens an account and never adopts one (B5).
P2	Sign in (email + password, remember me)	Implemented	<code>Shared components/auth/portal-login-form.tsx</code> ; rate limited in <code>lib/auth.ts: 438-452</code> .
P3	Forgot password / reset	Missing	Only <code>POST /api/users/password-reset</code> , SUPERADMIN only. A parent who forgets must phone the office.
P4	Switch between children	Implemented	Household loaded server side; selection in <code>localStorage</code> ; every child call re-checks the link in <code>child/_guard.ts</code> .
P5	Home glance: owed, attendance, marks ready, today's lessons, latest notices	Implemented	<code>parent-home-screen.tsx</code> . Withheld figures are absent, not zero. Since revised (<code>ed82dc1</code>): the hero leads with what was paid when nothing is owed, with the amount, the due date and "How to pay" when something is, and the marks tile carries the average rather than the word "Ready".
P6	View attendance by day and term	Implemented	Consent not required for attendance. Most days read "not yet submitted" until the office submits (see staff portal audit). The submit exists now (<code>50df723</code>), so the label applies to the days it is true of; the screen is a six-week grid with a tappable day (<code>ed82dc1</code>).

#	Workflow	Status	Evidence and gap
P7	Report an absence in advance / request leave	Missing	Prototype leave-request screen; no API, no story. The day sheet's "Tell the school why" opens a message to the office, which is a channel rather than a record.
P8	View published marks with pass mark	Implemented	Publish window not enforced in the JSON route (<code>child/marks/route.ts</code>), only in the PDF. That is now the decision rather than the gap — see the S-6.5 row above and B3.
P9	Download report card	Broken	<code>parent-marks-screen.tsx:171-176</code> → render route 403. The 403 is fixed (<code>1f1501c</code>) and the download still fails: <code>resolveReportCard</code> requires an OPEN publish window for the term and no seeded school has one, so the render throws (B10).
P10	View fee statement: invoices, lines, paid, balance, receipts	Implemented	Money crosses as strings. VOIDED and DRAFT invoices excluded.
P11	Download invoice / receipt / statement PDF	Implemented	<code>parent-fees-screen.tsx:269-273</code> → render route 403. Fixed in <code>1f1501c</code> : the guardian link and the <code>canReceiveFinancials</code> flag decide it, and every refusal answers alike with 404 so an id cannot be walked.
P12	Pay online (EcoCash, OneMoney, bank, card)	Missing	<code>lib/payments/*</code> serves subscription billing only; nothing in the portal references it. S-7.3 <code>todo</code> . A "How to pay" sheet now gives the amount, the due date, the invoice reference to quote and the pupil's number (<code>ed82dc1</code>) — deliberately not bank or mobile-money details, which the tenant model does not carry (B12).
P13	Part payment / payment plan	Missing	S-6.10 <code>todo</code> ; no instalment model anywhere.

#	Workflow	Status	Evidence and gap
P14	Payment history filtered by child and method	Partial	S-6.11 <code>todo</code> . Receipts are listed per invoice only. Since revised (<code>ed82dc1</code>): past payments are their own section on Fees, grouped by month, each with its method and reference and its own receipt download. There is no filter by method, and the child is the one in the switcher rather than a filter.
P15	Read school notices, mark read, mark all read	Implemented	In-app only; the body renders in the list row; no detail screen or attachments. A notice too long for a row now opens on its own screen and is marked read there (<code>ed82dc1</code>); attachments, RSVP and replies are still absent.
P16	Reply to a notice	Missing	S-6.13 depends on S-7.1.
P17	Message the school office (start thread, reply)	Implemented	<code>parent-messages-screen.tsx</code> ; reached via the You tab, not a bottom tab. It is now also a Home shortcut and an app-bar primary, and the open thread lives in the URL (<code>ed82dc1</code>). Until <code>d26c31e</code> nothing the family sent could be answered from the office screen at all (B11).
P18	Message a named teacher, attach a file	Partial	API accepts <code>teacherProfileId</code> ; UI always sends null; no attachments. The id is now checked against the tenant (B6).
P19	School calendar / events / RSVP	Missing	S-6.15 <code>todo</code> ; calendar model exists (<code>SchoolCalendarEvent</code>) but no parent route.
P20	Child's timetable and homework	Missing	Prototype has timetable; today's lessons only on Home.
P21	Child profile: medical, allergies, emergency contacts, transport, boarding	Missing	Prototype <code>child/:id</code> . Health model exists (<code>lib/schools/health.ts</code>) with no parent read. Welfare became its own resource for the office (<code>c4689af</code>); no portal route reads it.
P22	Update own contact details, consent preferences	Missing	Profile is read-only (<code>parent-profile-screen.tsx</code>). The chevrons that implied otherwise are gone (<code>ed82dc1</code>), which makes the screen honest rather than capable.

#	Workflow	Status	Evidence and gap
P23	Book a parent-teacher meeting	Missing	POST /api/v2/schools/meetings has a book action but requires schools.students.edit; no parent screen. The grant is now book-meeting (c4689af, 4fce301), which a teacher holds and a parent does not: a teacher opens an evening and books a family in, and the family is still told by hand.
P24	Notifications: absence, invoice issued, payment received, results published	Missing	S-9.2 to S-9.4 todo; no trigger in any fee, attendance or publish route.
P25	Language (English, Shona, Ndebele)	Missing	S-6.16 todo.
P26	Security: OTP sign-in, 2FA, session list	Missing	S-6.1, S-6.17, S-6.18 todo.
P27	Help	Implemented	Static FAQ with one false claim (PDF downloads). The claim is true now, the answer about a "row of names" that does not exist is gone, and the one channel the portal owns — write to the office — is a row at the foot (ed82dc1). Still no phone, email or WhatsApp row, because the school's contact record does not reach the portal.
P28	Sign out	Implemented	Now asks first, which a shared phone needs (ed82dc1).

Counts at the audit: 10 implemented, 1 partial, 2 broken, 15 missing. At revision: 12 implemented, 2 partial, 1 broken, 13 missing.

4. Benchmark gap: what mature parent apps do that this one does not

Graded against ../reference/k12-benchmark.md §17 (portals), §8 (communication), §9 (fees).

Capability	Benchmark norm	Huchu today	Priority
Pay fees in the app with instant receipt	Standard in every regional SIS with a portal	Absent. A "How to pay" sheet names the amount, the date and the reference; the payment itself happens at a bank or an office counter	P0 for the fees-first positioning
Push, SMS or WhatsApp on absence, invoice, receipt, results	Standard	Absent; in-app only	P0
Report absence / request leave with reason and attachment	Standard	Absent	P1

Capability	Benchmark norm	Huchu today	Priority
Download statement, receipt, report card	Standard	Statement, invoice and receipt download; the report card is refused for want of an open publish window (B10)	P1 (report card)
Update contact details and consent, with office approval	Standard	Absent	P1
See timetable, homework set, and homework status	Standard	Absent	P1
Book parents' evening slot	Common	Absent for the parent; the teacher side of it works and the grant is now book-meeting	P1
Medical and emergency profile per child	Common	Absent	P2
Behaviour and merits	Common	Parked S-P.1	P2 (product decision)
Multiple guardians per child with different rights	Standard	Modelled (SchoolStudentGuardian with consent flags)	Done
Passwordless or OTP sign-in for low-literacy, shared-phone households	Increasingly standard in the region	Absent	P1
Offline read of last statement and timetable	Common in low-connectivity markets	Absent; marketing FAQ says otherwise. The shell now says when it is offline, which is not the same as working offline	P1

5. Bugs and risks

Severity is functional impact for the parent unless marked security.

#	Finding	Location	Severity
B1	Every document download fails for PARENT. The render route checks <code>canSchoolRoleDo(role, "schools.fees" "schools.results", "view")</code> and the PARENT persona holds only <code>schools.portal.parent</code>. The fix must not simply grant <code>schools.fees view</code>: the render route has no row-level check, so that would let a parent render any family's invoice by id. Add a guardian-link check in <code>lib/documents/schools-sources.ts</code> for portal callers. Fixed in <code>1f1501c</code>, and by record rather than by grant: <code>app/api/documents/render/_portal-scope.ts</code> resolves the pupil a document is about, requires the <code>SchoolStudentGuardian</code> link and the consent flag that document needs, and covers only the four documents a portal hands out — a class list and a transfer letter stay with the office. Every refusal answers 404 with one wording, so a <code>recordId</code> cannot be walked.	<code>app/api/documents/render/route.ts:101-108</code>, <code>lib/platform/personas.ts:160-162</code>, <code>lib/documents/schools-sources.ts:77-93</code>	High
B2	Attendance reads "not yet submitted" for almost every day because the teacher portal never submits a register. Fix on the staff side (add submit) and, until then, change the parent copy to explain what the label means. Fixed on both sides: the staff portal submits (<code>50df723</code>), and the parent screen says it once under the grid rather than on every row it applies to (<code>ed82dc1</code>).	<code>parent-attendance-screen.tsx:148-168</code>, <code>app/api/v2/schools/portal/teacher/me/attendance/route.ts:106-118</code>	High

#	Finding	Location	Severity
B3	Publish window enforced for the PDF but not for the marks JSON; a sheet published then windowed-closed stays visible in the app while the PDF refuses. This was wrong to record as a defect. The observation is accurate; the conclusion is not. The check was added and then reverted (1b774ea) because no school in the seed or in production has a publish window configured, so enforcing it here would have emptied every family's marks screen. What is true is the reverse of the finding: the window is the report card's gate, the sheet's PUBLISHED status is the portal's, and it is the report card that is unusable as seeded (B10).	child/marks/route.ts:40-46 vs schools-sources.ts:492-499	Low
B4	Help copy promises PDF downloads. Fixed twice over: the downloads work (1f1501c) and the answers were rewritten (ed82dc1), including the one that described a "row of names" the screen does not have.	parent-help-screen.tsx:28	Low
B5	Security: invite claim can reset the password and demote the role of an existing same-tenant account whose email the inviter chose. Refuse when the existing user holds a non-portal role or is already linked. Fixed in 1f1501c , and more bluntly than the finding proposed: claiming opens an account and never adopts one, whatever role the existing account holds. The refusal sits in the route and again inside the transaction that did the overwriting, so the service is safe without depending on its caller.	lib/schools/portal-invites.ts:243-273	Medium

#	Finding	Location	Severity
B6	Security: <code>startThread</code> writes a client-supplied <code>teacherProfileId</code> without a company check. Fixed in <code>50df723</code> : the id is resolved against the tenant, and a teacher writing to a family must take one of that family's children.	<code>lib/schools/messages.ts:250-310</code>	Low
B7	No audit row for any parent action (messages, read receipts). Still open. <code>lib/schools/audit.ts</code> gained register corrections and archiving (<code>50df723</code>); nothing a parent does is recorded.	<code>lib/schools/audit.ts</code>	Low
B8	On the <code>staff</code> host a PARENT token is rewritten into the teacher shell (empty) instead of redirected to the parent portal. Still open; <code>proxy.ts</code> is unchanged.	<code>proxy.ts:417-460</code> vs <code>:469-479</code>	Low
B9	Legacy aggregate routes (<code>/api/v2/schools/portal/parent</code> , <code>/parent/children/[studentId]/*</code>) re-implement scoping inline; unused by the shell. Delete. Still open; <code>app/api/v2/portal/_handlers.ts</code> is unchanged.	<code>app/api/v2/portal/_handlers.ts:119-363</code>	Low
B10	The report card cannot be printed by anybody at a school with no publish window, and no seeded school has one. <code>resolveReportCard</code> requires a row in <code>SchoolPublishWindow</code> with status OPEN spanning today for the term, and throws "Results for this term are not published" when there is none, so the render answers 500 after the portal check has passed. The audit did not see this because the permission refusal fired first. The gate itself is right — it is what S-1.3 is for — but nothing outside the windows API ever writes a window, so the parent's "Download report card" button is dead at every seeded school whose marks the same parent can already read on the screen behind it.	<code>lib/documents/schools-sources.ts:503-550</code> , <code>parent-marks-screen.tsx:178-183</code>	High

#	Finding	Location	Severity
B11	A family's message reached an office that could read it, decide who should take it and end the conversation, but could not answer it. Replies were written only from the staff portal, so a fee query put to the office was either closed or handed to a teacher who cannot see the ledger. The audit recorded this on the bursar's document as a permission refusal; the truth was worse and simpler — no reply action existed for any role. Fixed in d26c31e : a reply action gated on <code>schools.reports.reply</code> , which the bursar and the head of department hold, with triage and answering as separate grants.	<code>app/api/v2/schools/messages/route.ts</code> , <code>components/schools/messages/office-inbox-content.tsx</code>	High
B12	The "How to pay" sheet can only say half of what a parent needs. <code>CompanyBranding</code> carries bank details that never reach the portal, and there is no mobile-money merchant code on the tenant model at all, so the sheet shows the amount, the due date, the invoice reference and the pupil's number and stops there. Found while building the sheet (ed82dc1), which shows what it can stand behind rather than a blank labelled "Bank".	<code>parent-how-to-pay-sheet.tsx</code> , tenant model	Medium

6. Proposed edits (fix what exists)

Ordered by value to the parent per unit of work. Items 1, 2, 3 and 6 are done, and 7 in part; the rest stand.

- Fix the downloads (B1).** Add a `portalSubject` branch in the document render path: for role `PARENT`, resolve the guardian from the session and require a `SchoolStudentGuardian` link plus the relevant consent flag before rendering `schools.fee.invoice`, `schools.fee.receipt`, `schools.fee.statement`, `schools.report-card`. Add a `parent-scope.test.ts` case for a stranger's receipt id. Correct the roadmap rows for S-6.7 and S-6.8. Done in 1f1501c, with `portal-scope.test.ts` covering the stranger's receipt, the withheld consent flag and the unlinked guardian. The roadmap rows are not corrected: nothing under `docs/expansion-plan/` has been touched.
- Close the register loop (B2).** Belongs to the staff portal audit, but the parent-facing effect is the worst copy in the product. Until submit lands, change "not yet submitted" to "the office has not confirmed this

day yet", and hide the label on days older than the current week. Done, and the interim copy was not needed: submit landed (50df723), and the label is now a dashed square explained once under the grid.

3. **Make the attendance day open.** The prototype `attendance/:day` shows the lessons that day; the API already returns session lines. One tap to open the day is missing. Done in `ed82dc1` as a sheet with the register state, the class, the teacher's note and "Tell the school why". The lesson-by-lesson breakdown still needs a per-period register the API does not return.
4. **Add "Message a teacher".** The API accepts `teacherProfileId`; add a picker limited to the teachers assigned to the selected child's class subjects (`SchoolClassSubject` for the child's enrolment). Promote Messages to a visible entry on Home (the prototype has a shortcut pill). Half done: Messages is a Home shortcut, a You row with an unread count and the app bar's primary on its own screen. There is still no teacher picker, and the mark sheet's "Ask about this subject" opens a thread to the office rather than naming a teacher the API does not return.
5. **Update roadmap rows** S-6.14 (partial, office thread exists), S-6.7 and S-6.8 (broken), and add rows for the prototype screens with no story (leave request, calendar, timetable, child profile, quiet hours, payment history).
6. **Fix the help FAQ (B4)** and add the six questions the roadmap S-6.19 names, in the parent's words. Done in `ed82dc1`.
7. **Harden the claim (B5, B6)** and delete the legacy aggregate routes (B9). The two security findings are closed (`1f1501c` , `50df723`); the legacy routes are still there.
8. **Redirect on wrong host (B8):** on a portal host, run the role-to-portal check before the rewrite, mirroring the POS refusal in `lib/auth.ts:567-579`.

7. Proposed restructuring

- **Tabs.** The prototype's four tabs are Home · Fees · News · You. The code uses Home · Fees · News · You in the shell but the roadmap calls them Notices and Profile. Pick one vocabulary and put it in `docs/design-system/portals/README.md`. Recommendation: keep the prototype's labels because they are the contract, and fix the roadmap row S-6.0. Unresolved: the shell still ships the prototype's labels and the roadmap still carries its own.
- **Messages is buried.** Two-way messaging is the single feature that stops a phone call. Surface it as a Home shortcut and as a row on the You tab with an unread badge, matching the prototype. Done in `ed82dc1`, and the office can now answer what arrives (B11).
- **Fees tab becomes a hub**, not a list: balance hero, "Pay now" (when P12 lands), statement, receipts, payment history, saved methods, discounts. Today it is one long scroll per child. Part done: hero, statement, receipts and past payments by month are sections, with "How to pay" where "Pay now" will go. Each is still a band on one route rather than a route of its own, and saved methods and discounts do not exist.
- **Merge the two child-fee API generations.** `/child/*` with `scopeToChild` is the pattern; `/children/[studentId]/*` and the `/parent` aggregate duplicate it. Delete the old ones after confirming nothing in `e2e/` calls them.
- **Move consent editing** (`canReceiveFinancials` , `canReceiveAcademicResults`) from a registrar-only PATCH to a visible state on the parent's profile, read-only for the parent with "ask the office" copy. Parents currently cannot see why a figure is withheld. Unchanged, and now one step further from the

parent: a document refused for a withheld consent flag answers 404 with the same wording as one that does not exist, which was taken deliberately to stop id-walking and costs the parent the explanation the JSON routes still give.

8. Proposed new workflows and features

Ranked. Each entry names the model and route it needs so it can become a roadmap story under the roadmap's new-scope rule. None of these has been built; the first and the third have had their groundwork laid.

1. **In-app fee payment (S-7.3, S-6.9).** Reuse `lib/payments/ PaymentProviderAdapter` with a new `SchoolFeePayment` intent linked to `SchoolFeeInvoice`; on `PAID` create the `SchoolFeeReceipt` through the existing allocation and posting flow so the bursar sees one receipt stream. Adapter order for Zimbabwe: EcoCash and OneMoney via Paynow first, card second, bank transfer as a "tell us you paid" proof-of-payment upload with bursar confirmation. Add S-6.10 part payment as an amount step on the same flow. The instructions step shipped first, as the "How to pay" sheet; before the gateway, the tenant model needs the bank and mobile-money fields it does not have (B12).
2. **Notifications with a real channel (S-9.2 to S-9.5).** Emit on `attendance session submitted` with `absence`, `invoice issued`, `receipt posted`, `result sheet published`, `notice created`. Deliver to in-app plus one external channel. WhatsApp is the regional default; the invite link already assumes a human forwards it on WhatsApp. Add a `schools` category to `UserNotificationPreference` with quiet hours.
3. **Absence and leave request (prototype `leave-request`).** New `SchoolAbsenceNotice` (student, guardian, date range, reason, attachment, status `REPORTED / ACKNOWLEDGED`). Surfaces on the office absence follow-up board and pre-fills the register as an authorised absence. The day sheet now has the place to launch it from: "Tell the school why" opens a message instead.
4. **Contact and consent self-service.** Guardian edits phone, email, address as a pending change; registrar approves. Consent preferences editable where the school allows.
5. **Parents' evening booking.** Reuse `SchoolMeetingSlot` free slots; parent books from the child's teacher list; teacher and parent both get a notification. The grant it needs exists and is `book-meeting`; what is missing is the parent's screen and the telling.
6. **Child profile screen.** Read-only medical, allergies, emergency contacts, transport stop, hostel allocation. Sources already exist (`health.ts`, `transport.ts`, `boarding.ts`), and health is now its own `schools.welfare` resource rather than a boarding gate.
7. **Timetable and homework** for the selected child, reusing the student `me/timetable` and `me/homework` loaders with a guardian scope.
8. **Calendar and events with RSVP** over `SchoolCalendarEvent`, plus iCal export.
9. **OTP sign-in by phone number (S-6.1)** and language picker (S-6.16). These matter more than 2FA for this audience; sequence them ahead of S-6.17 and S-6.18.
10. **Offline read cache** for the last statement, timetable and notices, using the existing service worker but scoped so it does not sit in front of `/api/v2` (the e2e suite currently has to block it).

9. Open decisions for the product owner

- Which channel is the default for parent notifications: WhatsApp Business API, SMS aggregator, or web push only? Cost per message decides the design.
- Which payment provider for fees? The subscription seam has three adapters; none is designated for school fees. Whichever it is, the tenant model needs somewhere to keep a merchant code and bank details (B12).
- Should a parent see DRAFT registers at all, or only submitted ones? Today they see the draft with a label, and now that a teacher can send a register in the answer matters less than it did.
- Is behaviour/discipline (parked S-P.1) staying out of the parent portal? Every benchmark app shows it.
- Contract vocabulary: prototype labels or roadmap labels.
- Should a school with no publish window be able to print a report card (B10)? The alternatives are a default-open window at term setup, or a gate that falls back to the sheet's `PUBLISHED` status when no window has ever been configured.
